SAFETY PRECAUTIONS

Each Coffing LSB-B Manually Operated Lever Chain Hoist is built in accordance with the specifications contained herein and at the time of manufacture complies with our interpretation of applicable sections of *American Society of Mechanical Engineers Code (ASME) B30.21 and the *American National Standards Institute ANSI/ASME HST-3M. *Copies of this Standard can be obtained from ASME Order Department, 22 Law Drive, Box 2300, Fairfield, NJ 07007-2300, U.S.A.

WARNING

Improper operation of a hoist can create a potentially hazardous situation which, if not avoided, could result in death or serious injury. To avoid such a potentially hazardous situation, the operator shall:

1. **NOT** operate a malfunctioning or unusually performing hoist.
2. **NOT** operate the hoist until you have thoroughly read and understood the manufacturer's Operating and Maintenance Instructions or Manuals.
3. **NOT** operate a hoist which has been modified without the manufacturer's approval or certification to be in conformity with applicable OSHA regulations.
4. **NOT** lift or pull more than rated load of the hoist.
5. **NOT** use damaged hoist or hoist that is NOT working properly.
6. **NOT** use hoist with twisted, kinked, damaged, or worn load chain.
7. **NOT** operate with any lever extension (cheater bar).
8. **NOT** attempt to "free-chain" the hoist while a load is applied.
9. **NOT** use the hoist to lift, support, or transport people.
10. **NOT** lift loads over people and shall make sure all personnel remain clear of the supported load.
11. **NOT** attempt to lengthen the load chain or repair damaged load chain.
12. Protect the hoist's load chain from weld spatter or other damaging contaminants.
13. **NOT** operate hoist when it is restricted from forming a straight line from hook to hook in the direction of loading.
14. **NOT** use load chain as a sling or wrap load chain around load.
15. **NOT** apply the load to the tip of the hook or the hook latch.
16. **NOT** apply load unless load chain is properly seated in the chain wheel(s) or sprocket(s).
17. **NOT** apply load if bearing prevents equal loading on all load supporting chains.
18. **NOT** operate beyond the limits of the load chain travel.
19. **NOT** leave load supported by the hoist unattended unless specific precautions have been taken.
20. **NOT** allow the chain or hook to be used as an electrical or welding ground.
21. **NOT** allow the chain or hook to be touched by a live welding electrode.
22. **NOT** remove or obscure the warnings on the hoist.
23. **NOT** operate a hoist which has NOT been securely attached to a suitable support.
24. **NOT** operate a hoist unless load slings or other approved single attachments are properly sized and seated in the hook saddle.
25. **NOT** lift loads that are NOT balanced and that the holding action is NOT secure, taking up slack carefully.
26. **NOT** operate a hoist unless all persons are and remain clear of the supported load.
27. Report malfunctions or unusual performances of a hoist, after it has been shut down until repaired.
28. **NOT** operate a hoist which the safety placards or decals are missing or illegible.
29. Be familiar with operating controls, procedures, and warnings.

SAFETY PRECAUTIONS (Continued)

CAUTION

Improper operation of a hoist can create a potentially hazardous situation which, if not avoided, could result in minor or moderate injury. To avoid such a potentially hazardous situation, the operator shall:

1. Maintain a firm footing or be otherwise secured when operating the hoist.
2. Check brake function by tensioning the hoist prior to each lift or pulling operation.
3. Use hook latches. Latches are to retain slings, chains, etc. under slack conditions only.
4. Make sure the hook latches are closed and not supporting any parts of the load.
5. Make sure the load is free to move and will clear all obstructions.
6. Avoid swinging the load or hook.
7. Avoid lever “fly-back” by keeping a firm grip on the lever until operating stroke is completed and the lever is at rest.
8. Inspect the hoist regularly, replace damaged or worn parts, and keep appropriate records of maintenance.
9. Use the hoist manufacturer’s recommended parts when repairing the unit.
10. Lubricate load chain per hoist manufacturer’s recommendations.
11. **NOT** use the hoist load limiting or warning device to measure load.
12. **NOT** operate except with manual power.
13. **NOT** permit more than one operator to pull on lever at the same time. More than one operator is likely to cause hoist overload.
14. **NOT** allow your attention to be diverted from operating the hoist.
15. **NOT** allow the hoist to be subjected to sharp contact with other hoists, structures, or objects through misuse.
16. **NOT** adjust or repair the hoist unless qualified to perform such adjustments or repairs.
17. **NOT** expose the unit to high temperatures in excess of 200°F.

HOIST SPECIFICATIONS

Coffing Lever Hoists are made of the best selected materials to provide long dependable service for users. Coffing Lever Hoists are manufactured and processed through up to date streamlined production facilities by skilled engineers under strict quality control. All lever hoists are tested per ASME B30.21 before leaving our factory. Refer to the back cover for Certification Statement.

Figure 2 - Chain Lubrication

Figure 3 - Correcting Chain Twist

APPLICATION INFORMATION

1. Inspect carefully for any damage that may occur during shipping. Check for loose, missing, or damaged parts.
2. Lubricate the load chain along the whole length with machine oil (See Figure 2).
3. Examine the load chain to ensure that there is no twist. When your lever hoist is a 6 ton that lifts on 2 falls of load chains, twists can arise from the bottom hook being accidentally turned over through the load chains (See Figure 3).
4. Confirm that the supporting structure is strong enough to support the full rated capacity of the lever hoist with a generous factor of safety.

SAFETY INFORMATION

1. Keep the load within the rated capacity marked on the hoist's lever. An excess load may lead to an accident. The lever hoist is overloaded when the handle effort indicated in the standard specifications is exceeded (See Table 1).
2. Before operating, lift and lower the load about 4" and test the brake system. Ineffective braking may lead to an accident.
3. Loads must be lifted as slowly as possible. Load swinging and abrupt shocks will impose on the lever hoist excessive burdens that may more than double the weight of the load.
4. Extreme temperatures will affect the durability of the lever hoist. In subzero temperatures loads must be lifted and lowered very slowly and carefully.

Figure 4 - Incorrect Attachment

Figure 5 - Correct Attachment

5. When hooking, the load must be applied squarely to the center of the hook and the hook must not come loose during operation. NEVER USE THE HOOK DIRECTLY ON A LOAD (See Figure 4). Use the attachments as shown in Figure 5.

Figures 6 through 9 show improper hooking methods, which may cause the hook to elongate or bend. These hooking methods may also obstruct the load chain flow to the load sheave and prevent the lever hoist from operating properly.

6. Never run the chain out too far. When the lever hoist is run out beyond the range of lift, a dangerous excessive load will be imposed on the load chain, stop grip and gearing.
7. The selector lever must be set to the "UP" position when the lever hoist is under a load during hoisting or pulling.
8. Lifting a load with two lever hoists is not recommended. If the job is unavoidable, keep the load well within the total rated capacity of each lever hoist to avoid overloading one or both of the hoists; lift with exceptional care while maintaining proper balance, angle and lifting speed.

CAUTION
 In applications similar to Figures 6 through 9, be sure to use the correct slings and attachments to ensure safe operation and long life of the lever hoist.

Figure 6

Figure 7

Figure 8

Figure 9

9. Do not throw or drop the lever hoist from high places; do not drag the lever hoist in transportation. Doing so may cause damage that may lead to an accident.
10. Never leave or store the lever hoist with the brake system locked. Loosen the brake system by operating the lever hoist as if lowering a load.
11. Always service and repair the lever hoist after use. Thoroughly clean the dust or if used in the rain, wipe off the dirt and moisture and lubricate the lever hoist to prevent rust.
12. Inspect the hooks and load chain for bends and any other types of defects. Also check to see if the hooks rotate. If any defect is found, replace the defective component before using the lever hoist again.

OPERATION

HOISTING (PULLING) AND LOWERING (RELEASING) (Figure 1)

 **CAUTION**

Do not forget to lubricate the load chain, rotation section of the bottom hook and the chain guides.

1. Hoisting (Pulling)

Set the selector lever to the "UP" position. Take up the slacked load chain by turning the guide handle clockwise. Next, manipulate the operating handle clockwise.

2. Lowering (Releasing)

Set the selector lever to the "DOWN" position. Manipulate the operating handle counterclockwise. When there is no load on the lever hoist, the load chain can be slacked by turning the guide handle counterclockwise.

FREE-CHAINING (Figure 1)

This operation is for making quick large adjustments of the load chain length without load. Set the selector lever to the "N" position and pull the load chain out in the desired direction. Free-chaining will not be possible during the following conditions:

1. When the lever hoist is under a load.
2. When the guide handle is in contact with something and not rotating freely.
3. When the brake has locked from a large or abrupt load:
Turn the guide handle 45° counterclockwise to unlock the brake.
4. When the brake is locked:
The brake can be unlocked by setting the selector lever to the "DOWN" position and manipulating the operating handle counterclockwise.

RESETTING (Figure 1)

The lever hoist will automatically change from the free-chaining condition to the brake locked condition when a load is applied. Apply the load with one of the following two methods:

- a. Turn the guide handle clockwise until the brake locks from the force of the load.
- b. Pull firmly on the stop grip until the brake locks from the force of the load (See Photo 1).

Next, turn the selector lever to the "UP" position and hoist or pull by manipulating the operating handle.

Photo 1 - Slack Chain Take-Up

MAINTENANCE

The lever hoist is designed and made to withstand heavy-duty materials handling operations, but wear and damage are unavoidable after a long period of use and depending on the place and method of use. This is why we suggest that your company or workshop adapt a periodic inspection program for the lever hoist.

1. Never leave the lever hoist in a damp environment or damp weather such as rain. Always store the lever hoist in a dry airy area.
2. Proper lubrication will help lengthen the life of the lever hoist. Before storing, check to see if the lever hoist is well lubricated. Be especially sure that the moving parts such as gears and bearings are well lubricated.

LOAD CHAIN

Load chains worn-out or elongated beyond the permissible dimensions must be replaced at once. Replace the entire load chain immediately even if one link of the load chain is extensively worn-out, elongated or damaged.

HOOKS

If the hook opening is elongated beyond the permissible dimension, the hook is dangerously deformed and must be replaced at once. No deformation of the hook should arise when the lever hoist is used and maintained properly.

Hoist Capacity (tons)	Diameter (ømm)	Standard (in.)	Limit (in.)
.75	5.6	6.732	6.866

1.5	1 ¹³ / ₃₂	1 ⁹ / ₁₆
3	1 ²¹ / ₃₂	1 ¹³ / ₁₆
6	2 ³ / ₆₄	2 ¹ / ₄

NOTE: Limit *C (in.) are the maximum permissible dimensions of the hooks, which are about 10% wider than the standard hook openings.

OPTIONAL OVERLOAD PROTECTION

A standard LSB-B Lever Hoist can be converted to a unit with the overload protection by replacing Reference No. 14 (See Figures 15 & 16) with Reference No. 80 (See Figure 12). Refer to chart below for the appropriate load limiter for your capacity hoists.

Figure 12 - Overload Protection Device

Ref. No.	Description	.75 Ton Part No.	1.5 Ton Part No.	3 Ton Part No.	6 Ton Part No.	Qty
80	Overload Protection Device	IRB5080U	KRB5080U	NRB5080U	QRB5080U	1

The load limiter may require adjustment when it slips at or below rated load. Please refer to chart below for the correct torque setting for the load limiter. Only adjust the load limiter by Reference No. 110. If the load limiter cannot be corrected by adjusting the torque setting or if any of the parts are damaged then the load limiter must be replaced. A special tool is required to adjust Item 110 properly (Contact Factory).

Table 2 - Torque Range for Item 110

Hoist Model	Torque Range (foot-lbs)
LSB1500B	28 - 32
LSB3000B	59 - 66
LSB6000B	77 - 85
LSB12000B	77 - 85

NOTE: Excessive torque will damage the load limiter and could cause equipment damage or personal injury.

Overloading and Improper Use Can Result In Injury

TO AVOID INJURY:

- Do not exceed working load limit, load rating, or capacity.
- Do not use equipment to lift people or loads over people.
- Use only alloy chain and attachments for overhead lifting.
- Read and follow all instructions.

Certification Statement

This is to certify that the accompanying Coffing Hoist(s) has (have) been tested at 125% of rated capacity and inspected in accordance with ASME/ANSI B30.16 or B30.21. Do not exceed rated capacity stated on the hoist. Refer to manual for operating instructions and forward manual to operator.
